Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1837 edition. Excerpt: .equiangular. Therefore $LD: (c)H = HE: EP$, and (16, 6, E.) $LD: EP = DH: HE = HD: 1 = HE$. If the point A be in the arc of the opposite segment, and hd be drawn parallel to FL , and AE to PF , it will in like manner appear that $Lrf: EP = hd: 1 = AE: 1$. Cor. 1. The points D and d being determined as directed in the proposition, $LP: LD = LH: LP$, and $LP: hd = LA: Ld$. The triangles DLH , HLP have the angle at L common to both, and the angles DHL , HPL equal, because each is equal to the angle HKL (29, 1, E. and 32, 3, E.), therefore they are equiangular; hence $LP: LH = LH: LD$ (4, 6, E.), and $LP: LD (= LP: LIP) = LH: LD$ (Cor. 19, 6, E.). In the same way it may be proved that $LP: hd = LA: Lrf$. Cor. 2. If E, the intersection of the chords, HA , PL , be between P and L, the points D, d will be on opposite sides of the point P. For in this case the chord LH will be greater than the chord LP , and the chord LA will be less; therefore LH will be greater than LP , and LA less; consequently (from Cor. 1) LD will be greater than LP , and Lrf less than LP . Cor. 3. If the chord HA which is parallel to the tangent PF , be supposed to approach...
