Special notice must be taken of the instructions for charging the generator, as it is essential that the feed valve and the top cover valve should never be open together, and no attempt must be made to look inside the generator from the top either while the plant is working or immediately after the engine has stopped. Working Of Gas Engines With Suction Plants. (1) The gas should be quite cool when it reaches the engine, and if it is not so it is fairly certain that either the supply of cooling water to the scrubber has failed or is too much diminished, or that the sprayer inside of the scrubber has become choked. (2) The engine valve spindles should be thoroughly cleaned and kept quite free, and the valves ground to their respective seatings at least every three or four weeks or more frequently...
